THE NEW URBAN SPIRIT

Our Services

We have a great team of people ready to help realise your scheme. Qualified project designers, technical lighting experts, customer focussed project managers – all with a desire to create stand-out lighting projects with you. You can opt for a full solution or a simple product support service, the choice is entirely yours.

Our wraparound services combine project design & management, technical & product support, BIM capabilities, energy calculations and ROI proposals. Every customer and every project has a specific Project Coordinator and Project Sales Engineer for a seamless service.

Technical support

We provide technical support whenever you need it. From product selection and custom options through to site visits, payback calculations and sustainability data, to controls solutions and smart technology integration.

Project design

Our experienced LIA and LET qualified Project Designers use the latest software to create everything from simple calculation plots to full 3D visualisations. You can talk to and meet with the Project Designer directly to discuss your scheme. We produce a comprehensive layout, broken down into zones detailing fitting types and lux values.

Project management

Our dedicated Project Sales Engineers and Coordinators will be there at every stage of your project. Based both in our offices and out in your region, they are on hand all day, every day to answer queries and proactively progress your scheme.

BIM capabilities

BIM is becoming increasingly important in construction so we provide BIM files for our luminaires, making sure you can speed up the design process and integrate smoothly in to the full build plan. We can work with you to understand any other design requirements you might have and provide the right files and data.

Controls and Smart Technologies

Controls and other smart tech can transform a lighting scheme by adding functionality, creating drama, saving on energy or providing real-time data. We can supply luminaires that work with simple step-dimming protocols, DMX colour change programmes or DALI and Wifi controls solutions. We can work with you to explore the possibilities of integrating smart technologies.

Delivery

After your project has been specified we ensure that it gets delivered to the contractor in-line with the site requirements. Our fleet of vehicles offers nationwide delivery options with safe, efficient offloading capabilities for luminaires and columns. Product is delivered to site with clear scheme plans and product installation guides.

Soul 180 & Soul 180 Urban

SOUL 180 and Soul 180 Urban is a stylish indirect, circular bollard and light pole. Available in three heights it suits a variety of amenity and urban settings.

ARCLUCE 

Soul 180 & Soul 180 Urban

Key Features

- LED Lumens 1400–1900
- 700mA
- Power 19W–24W
- Efficacy 79.2 luminaire lm/W
- 3000K, 4000K, CRI >70
- Lifetime >50,000hr L80
- Bollard & pole versions, 1m, 3m, & 3.5m

Applications

- Urban environment
- Residential
- Hospitality & Leisure
- Retail
- Commercial
- Pathways & parks

Optics

Polar Curves
