External Lighting Controls

About Kingfisher Controls

Our smart control system offers a wireless solution that has been designed to not only save you time on programming but to save energy output and of course money.

Using this simple, yet powerful system will allow full control over your lighting scheme. We design a bespoke system to fit the needs of your site and its functions, making sure you get the most out of the lighting and take advantage of maximum savings.

The System

Controllers

Kingfisher Control System starts with the controller, this forms the basis of all systems. These devices can be pre-fitted into each luminaire and give the ability to link, dim and control luminaires when integrated with dimmable drivers and sensors.

Scene Switch

Scene setting is an important aspect of lighting control, but some systems are over complicated. Our scene switches are simple to use and install and take little or even no training to operate. Simply pre-programme the numbered switches to your desired command and the system does the rest for you! Scene switches with 2, 4 or 6 buttons can be supplied for use with the 230V or battery powered controllers.

Web connected or Wired Solutions

Our controllers offer the perfect bespoke solution for wireless controls and scene setting. The controllers are installed into each luminaire and communicate directly to the scene switch. For locations without internet access, our wired system allows you to have the same functionality through access points.

Key Features

- Wireless or wired control capabilities
- Bespoke system design
- Simple installation
- Dim lighting by DALI or 1-10V
- Switch lighting on or off via Relay, PIR or Daylight sensor
- Scene setting
